

Requirement Gathering and Analysis

- Is a critical phase in the Systems Development Life Cycle (SDLC).
- It involves collecting and documenting the necessary requirements that a system must meet to ensure the final product fulfills the needs of its users and stakeholders.
- This phase ensures that the project team has a clear understanding of what the system should do and how it should perform.

A. Techniques for Requirement Collection

There are several techniques used to gather requirements from stakeholders:

1. Interviews:
